KEVIN PANCHANI

Software Engineer | Full-Stack Developer (MERN, Node.js, React)
London, UK | +44 7438 492048 | kevinpanchani04@gmail.com

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with an MSc in Computer Science (Middlesex University, London) and industry experience building production web applications with JavaScript, Node.js, Express.js, React.js and MongoDB (MERN stack). Skilled in RESTful API design, JWT authentication, role-based access control (RBAC), SQL and NoSQL database design, and static code analysis using Abstract Syntax Trees (AST). Experienced working in Agile/Scrum teams with Git-based workflows, code reviews and clean, maintainable code. Seeking a Software Engineer, Full-Stack, Frontend or Backend Developer role in the UK.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), Python, Java, C++, SQL, HTML5, CSS3
- **Frontend:** React.js, Vite, Tailwind CSS, Recharts, Responsive Web Design, Component-Based Architecture, State Management
- **Backend:** Node.js, Express.js, RESTful APIs
- **Databases:** MongoDB, MongoDB Atlas, PostgreSQL
- **Tools & Practices:** Git, GitHub, Postman, VS Code, Code Reviews, Debugging
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design Fundamentals, Cloud & DevOps Fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer Intern - Full-Stack Development - Desk Code Solution, India *Nov 2024 – Aug 2025*

- Delivered and maintained full-stack MERN modules (MongoDB, Express.js, React.js, Node.js) across multiple client projects during a 10-month internship.
- Engineered responsive, reusable React.js components for cross-browser and cross-device compatibility, reducing reported UI defects by 25–30%.
- Designed and integrated RESTful API endpoints for user authentication, data management and core business logic.
- Enforced secure CRUD operations, JWT-based authentication and role-based access control (RBAC) across multiple user roles to protect sensitive endpoints.
- Improved backend performance and API reliability through query optimisation and error handling, increasing response consistency by 25%.
- Collaborated in an Agile team with cross-functional stakeholders, converting business requirements into production-ready features and reviewing peer pull requests.
- Diagnosed and fixed defects across development and production environments using structured problem-solving and algorithmic thinking.
- Maintained clean, modular codebases with Git and GitHub using feature branches, pull requests and consistent commit practices.

Hackathon Team Lead (MERN) - CVM University & Vadodara Police, India *Mar 2023 – Aug 2023*

- Led a development team to design and deliver 2 working MERN-stack prototypes across 2 time-constrained hackathons.
- Engineered 2 end-to-end solutions - a smart car parking management system and a criminal detection system - spanning frontend, backend and database design.
- Drove architecture and system design decisions and presented technical solutions to mentors, police officials and judges, receiving positive evaluations.

PROJECTS

Find My Face - AI Photo Delivery Platform (*React.js, Node.js, Express.js, MongoDB Atlas, Face Recognition)*

- Building a full-stack face-matching photo delivery platform for event and wedding photographers, aimed at a worldwide audience.
- Photographers upload final edited galleries and share a single event link; guests take or upload a selfie and receive only the photos they appear in.
- Integrated facial recognition to match guest selfies against full event galleries, with a focus on improving accuracy for partial and half-visible faces.
- Delivered a working MVP on the MERN stack with MongoDB Atlas for storing event, gallery and user data.

React Technical Debt Analyzer (MSc Dissertation) (*Node.js, Express.js, React.js, MongoDB Atlas, Vite, Tailwind CSS, Babel AST, Recharts)*

- Built a full-stack static analysis tool that automatically detects, classifies and scores technical debt in React and JavaScript repositories.
- Applied Abstract Syntax Tree (AST) parsing with Babel to traverse codebases and flag code smells and debt patterns at component level.
- Designed an interactive React dashboard with Recharts visualisations so development teams can prioritise refactoring by debt score.
- Architected a RESTful Node.js/Express backend with MongoDB Atlas to persist analysis results and support historical comparison between scans.
- Solved cross-environment issues including process restart isolation, environment variable configuration and Express-database startup sequencing.

Bug Bounty & Bug Reporting Platform (*Node.js, Express.js, React.js, MongoDB, JWT)*

- Built a full-stack bug bounty platform where users submit bug reports against registered company products with descriptions and reproduction steps.
- Introduced a company workflow to review, approve and assign monetary rewards to valid reports, encouraging responsible disclosure.
- Configured role-based access control (RBAC) with 3 roles - user, company and admin - each with scoped permissions and dedicated views.
- Developed a secure admin panel to approve company registrations, manage users and monitor platform activity.
- Created an admin analytics dashboard showing real-time metrics: registered users, active companies, open/resolved reports and reward payouts.
- Secured all REST API endpoints with JWT authentication and enforced request validation through custom Express middleware.

EDUCATION

Master of Science (MSc) in Computer Science *Sep 2025 – Sep 2026*

Middlesex University, London, UK

- Dissertation: React Technical Debt Analyzer - automated technical debt detection using AST-based static analysis.

Bachelor of Engineering (BE) in Information Technology *Jun 2021 – Mar 2025*

CVM University, Gujarat, India

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Power Apps - Certification
- Vadodara Police Hackathon - Team Lead, Participation Certificate
- CVM University Hackathon - Team Lead, Participation Certificate
